A Bridge Toward a Greener Future

Natural gas also provides a major environmental benefit – it’s clean burning.

While creating a great deal of energy, natural gas releases low levels of emissions. This means greater use of natural gas can actually help our country reduce smog, acid rain and greenhouse gases.

Clean-burning natural gas offers such a tremendous energy value because it’s abundant, reliable and flexible. In fact, natural gas is versatile enough to be used in new vehicle technologies that could reduce pollution and lessen our reliance on foreign oil imports.

America’s Homegrown Energy Solution

In its original form, you can’t see or smell natural gas. But this invisible resource is poised to become one of America’s greatest energy success stories.

Composed mainly of methane, natural gas was formed hundreds of millions of years ago. Today, it serves as one of our nation’s cleanest, safest and most useful energy sources.

Whether heating, cooking or generating electricity, natural gas is about to play a major role in helping our country meet its future energy needs – especially since a vast amount of natural gas exists right here in America.

Why Is Natural Gas So Important?

More than 60 percent of the oil used in our nation comes from potentially unstable and unfriendly foreign governments. Such energy dependence puts us all at risk.

The good news is that America has enough natural gas in Pennsylvania alone to provide our country with up to 100 years of clean-burning energy for our homes, schools, hospitals, industries, vehicles and more.

You Can Count on Us

As America’s energy demands continue to grow, you can depend on all of us at Cabot to work hard at providing safe, efficient and clean-burning natural gas for decades to come.

Cabot Oil & Gas Corporation

Investing in Our Community

Cabot Oil & Gas Corporation is an independent natural gas producer and a leading developer of the natural gas supply contained in the Marcellus Shale in Susquehanna County, Pennsylvania.
